Limit job authorization scope to current project for release pipelines

Release pipelines can run with collection scoped access tokens unless this option is enabled. With this option enabled, you can reduce the scope of access for all release pipelines to the current project.

Protect access to repositories in YAML pipelines

Apply checks and approvals when accessing repositories from YAML pipelines. Also, generate a job access token that is scoped to repositories that are explicitly referenced in the YAML pipeline.

Disable stage chooser

With this enabled, users will not be able to select stages to skip from the Queue Pipeline panel.

Disable creation of classic build pipelines

No classic build pipelines can be created / imported. Existing ones will continue to work.

Disable creation of classic release pipelines

No classic release pipelines, task groups, and deployment groups can be created / imported. Existing ones will continue to work.
