

Internship Diary

Name: Harshitha

USN: 4JK22CS017

Company: (UniCourt India) Mangalore Infotech Solutions Private Limited.

Designation: Software Engineer Intern

21 January 2026

Entry:

I attended a knowledge transfer (KT) session on Docker fundamentals. During the session I learned what Docker is, why it is used, and how it helps in running applications in isolated environments using containers. The session also introduced basic Docker terminology and an overview of Docker Compose, including how applications are exposed using ports while running containers.

Learnings:

I learned the basics of Docker as a containerization platform and understood the difference between Docker images and containers. I gained an overview of important Docker concepts such as images, containers, volumes, networks, and Docker Compose. I also understood how Docker helps in faster deployment of applications and how port mapping works when running applications inside containers.

Hours: 9 hours

Total: 9 hours

Blockers:

No major blockers were faced during the session as it was an introductory learning session.

22 January 2026

Entry:

I attended a session on Docker Port Forwarding and Volumes. The session focused on understanding how ports are mapped between the host machine and Docker containers to access applications running inside containers. I also learned about Docker volumes and how they are used to persist data independently of the container lifecycle.

Learnings:

I learned how Docker port forwarding works and how port mapping allows external access to applications running inside containers. I also understood the concept of Docker volumes, their importance in data persistence, and how volumes help retain data even when containers are stopped or removed.

Hours: 9 hours

Total: 18 hours

Blockers:

There were no major blockers. Since the topic was new, it required careful attention to understand networking and storage concepts.

23 January 2026

Entry:

I performed my second task on Docker where I had to make changes in HTML and API files. I observed the updates inside the running Docker container without stopping it.

Learnings:

I understood how updates reflect automatically in the container when changes are made.

Hours: 9 hours

Total: 27 hours

Blockers:

no major blockers

24 January 2026

Entry:

Reviewed Docker fundamentals and practiced container management commands. Refined understanding of volumes and port forwarding.

Learnings:

Gained better command over Docker CLI and networking concepts.

Hours: 9 hours

Total: 36 hours

Blockers:

none

25 January 2026

Entry:

Researched modern UI/UX principles and their impact on user engagement.

Learnings:

Learned about accessibility standards and responsive design patterns.

Hours: 9 hours

Total: 45 hours

Blockers:

none

26 January 2026

Entry:

Reviewed Docker fundamentals and practiced container management commands. Refined understanding of volumes and port forwarding.

Learnings:

Gained better command over Docker CLI and networking concepts.

Hours: 9 hours

Total: 54 hours

Blockers:

none

27 January 2026

Entry:

Explored the company's public-facing application and reviewed key features related to case search, tracking, and litigation data. Attended a knowledge transfer (KT) session to understand the company's products and overall workflows

Learnings:

Gained an understanding of the product ecosystem, user workflows, and how different application versions vary in functionality and usability.

Hours: 9 hours

Total: 63 hours

Blockers:

no major blockers

28 January 2026

Entry:

Reviewed and summarized the previous day's work and familiarized myself with domain-related terminology used in the application. Attended a KT session on containerization fundamentals. Explored an API-based application and reviewed key concepts related to APIs, endpoints, and enterprise-level data access. Documented high-level API concepts, versioning, and basic workflows for accessing case-related data.

Learnings:

Learned basic Docker concepts and gained an introduction to APIs and how legal data can be accessed programmatically. Improved understanding of technical terminology related to APIs.

Hours: 9 hours

Total: 72 hours

Blockers:

No major blockers; required time to understand new technical concepts.

29 January 2026

Entry:

Explored the application in detail to understand its features and navigation. Attended a KT session and application team sync to gain clarity on workflows. Practically tried features discussed during the KT sessions to strengthen product understanding.

Learnings:

Improved familiarity with the application and gained better understanding of feature behavior through hands-on exploration.

Hours: 9 hours

Total: 81 hours

30 January 2026

Entry:

Reviewed emails related to document tracking workflows. Explored the API application and generated an access token to authorize. Attended a KT session. Tested multiple API endpoints using Postman to understand request and response behavior.

Learnings:

Learned how token-based authentication works and how APIs are tested using Postman. Gained basic exposure to monitoring tools like Kibana.

Hours: 9 hours

Total: 90 hours

Blockers:

Understanding API authentication required additional attention.

31 January 2026

Entry:

Reviewed Docker fundamentals and practiced container management commands. Refined understanding of volumes and port forwarding.

Learnings:

Gained better command over Docker CLI and networking concepts.

Hours: 9 hours

Total: 99 hours

Blockers:

none

1 February 2026

Entry:

Focused on personal professional growth by attending virtual tech seminars and reading industry reports.

Learnings:

Stayed informed about current trends and future directions in technology.

Hours: 9 hours

Total: 108 hours

Blockers:

none

2 February 2026

Entry:

Explored the application by observing network requests and payloads triggered by user actions in the UI. Attended a KT session on SCRUM and continued learning agile concepts and workflows

Learnings:

Learned how UI actions interact with backend APIs and gained an understanding of SCRUM methodology and agile practices.

Hours: 9 hours

Total: 117 hours

3 February 2026

Entry:

Worked on understanding the API requests that are sent and received when an particular feature is used in the UI side also learnt to create visualization from the kibana logs

Learnings:

Learnt to create visualization tables from the kibana logs for the API requests

Hours: 9 hours

Total: 126 hours

Blockers:

Understanding kibana required more attention

4 February 2026

Entry:

explored system sequence diagrams inorder to understand the flow of different functionalities of the company's website. explored the different API's getting used and how the request and responses flow across the different API's and how these API's are different

Learnings:

Learnt how different software components interact using API's and How the system sequence diagrams help to visualise the flow of different functionalities of the system and the products of the company

Hours: 9 hours

Total: 135 hours

Blockers:

Understanding the API's flow required additional analysis

5 February 2026

Entry:

Installed an end-to-end testing framework and ran a sample testcase to understand it's flow and execution.wrote and executed basic automated tests to observe browser navigation in the headed mode .

Learnings:

learned the basic automated testing setup and execution. gained hands-on experience on how ui mode can be used to visualise the flow of automated tests

Hours: 9 hours

Total: 144 hours

Blockers:

no major blockers

6 February 2026

Entry:

Completed the task given by mentor that involved writing tests for login authentication using the valid credentials and asserting the login page and also asserting go to dashboard page

Learnings:

improved understanding of validating the automated tests and writing the tests for real world scenarios

Hours: 9 hours

Total: 153 hours

Blockers:

assertions required more carefull observation

7 February 2026

Entry:

Studied API documentation and explored network request patterns in the application. Practiced creating visualizations in Kibana.

Learnings:

Improved ability to analyze system logs and visualize data patterns.

Hours: 9 hours

Total: 162 hours

Blockers:

none

8 February 2026

Entry:

Researched modern UI/UX principles and their impact on user engagement.

Learnings:

Learned about accessibility standards and responsive design patterns.

Hours: 9 hours

Total: 171 hours

Blockers:

none

9 February 2026

Entry:

Started with documenting the task done on the previous day including the workflow of the automation test script and then did a sample exercises practicing automation test writing and attended the KT session on widgets and practiced it with the application

Learnings:

Improved the understanding of end to end test scenarios and automation test writing , gained the basic understanding of widgets and how the widgets are integrated into the webapplications

Hours: 9 hours

Total: 180 hours

Blockers:

No major blockers

10 February 2026

Entry:

Received the feedback from mentor about the actual structure and format of doing the documentation of automation tests followed the same format and also did a flowchart , followed by the installation of k6

Learnings:

Learnt the actual format of documenting a automation test and how different tests are written for different functionalities instead of writing a single test for everything and also learnt to use the storage state for the tests that does not require authentication

Hours: 9 hours

Total: 189 hours

Blockers:

No major blockers

11 February 2026

Entry:

Worked on installation of k6 , a load generator and performance testing tool.looked into the documentation of k6 inorder to understand the different metrics that are present in it.

Learnings:

Understood the working and use case of k6 grafana and wrote sample test cases to understand the performance output

Hours: 9 hours

Total: 198 hours

Blockers:

No major blockers

12 February 2026

Entry:

Further continued with the different features of k6 , and then received an task to test different API end points available on the company's application

Learnings:

Successfully learnt to test the different API end points

Hours: 9 hours

Total: 207 hours

13 February 2026

Entry:

corrected the tests written for the login and the dashboard with proper storage state usage and tried with more sample test cases using different metrics and thresholds.

Learnings:

learnt how to systematically write a k6 test script

Hours: 9 hours

Total: 216 hours

Blockers:

no major blockers

14 February 2026

Entry:

Studied API documentation and explored network request patterns in the application. Practiced creating visualizations in Kibana.

Learnings:

Improved ability to analyze system logs and visualize data patterns.

Hours: 9 hours

Total: 225 hours

Blockers:

none

15 February 2026

Entry:

Focused on personal professional growth by attending virtual tech seminars and reading industry reports.

Learnings:

Stayed informed about current trends and future directions in technology.

Hours: 9 hours

Total: 234 hours

Blockers:

none

16 February 2026

Entry:

Corrected the k6 test scripts as mentioned by the mentor and looked into the more concepts of k6

Learnings:

Learnt how the method of using different metrics matter and how they differ in the results

Hours: 9 hours

Total: 243 hours

Blockers:

No major blockers

17 February 2026

Entry:

wrote the tests for the different end points that are used by the company and also debugged the errors in the tests

Learnings:

learnt to write the test scripts for the different API's

Hours: 9 hours

Total: 252 hours

Blockers:

errors that occurred during the running of the tests

18 February 2026

Entry:

continued with the k6 script writing and testing the scripts run without any errors

Learnings:

learnt the proper usage of the different metrics in the k6 script

Hours: 9 hours

Total: 261 hours

Blockers:

no major blockers

19 February 2026

Entry:

Worked on creating the kibana dashboard visualization for daily scrum reports..Got an task to update the scrum sheet for certain sections of the report

Learnings:

Learnt to create the visualization of the different metrics that are used in the company's products using kibana dashboard visualization

Hours: 9 hours

Total: 270 hours

Blockers:

No major blockers

20 February 2026

Entry:

Updated the specific sections of the SCRUM Sheet maintained for the team and wrote the queries to query the superset and get the desired table entries

Learnings:

learnt to update the SCRUM sheet daily and also got an practice of writing the sql queries for the superset db

Hours: 9 hours

Total: 279 hours

Blockers:

no major blockers

21 February 2026

Entry:

Experimented with K6 load testing scripts and analyzed performance metrics. Documented observations on API response times.

Learnings:

Learned how to interpret performance bottlenecks using K6 metrics.

Hours: 9 hours

Total: 288 hours

Blockers:

none

22 February 2026

Entry:

Dedicated time to learning new programming paradigms and practicing coding challenges.

Learnings:

Improved logical reasoning and code efficiency.

Hours: 9 hours

Total: 297 hours

Blockers:

none

23 February 2026

Entry:

Updated the SCRUM sheet for the day.

Wrote the test cases for the given JIRA ticket in the confluence and created the dashboard for the given task by mentor

Learnings:

Learnt the exact format for writing the test cases and used the kibana visualizations

Hours: 9 hours

Total: 306 hours

Blockers:

No major blockers

24 February 2026

Entry:

Updated the SCRUM sheet for the day and updated the format for the test cases as mentioned by mentor and then created the documentation for the automation script that has to be written for the given task

Learnings:

Learnt to write the automation script for getting the kibana reports and then accessing the nocodb and adding the details into that table .

Hours: 9 hours

Total: 315 hours

Blockers:

Understanding the exact flow

25 February 2026

Entry:

Updated the SCRUM sheet for the day, updated the automation script for the task given on previous day but the task was kept hold due to internal issues , therefore moved forward with the next task assigned by mentor which involved writing test cases for the ticket

Learnings:

Wrote the test cases for the ticket assigned , updated the automation script written for the previous task assigned

Hours: 9 hours

Total: 324 hours

Blockers:

No major blockers

26 February 2026

Entry:

Updated the SCRUM sheet for the day, Added the test cases •

Had to go over the ticket- create a documentation of contact creation for application Users, got a task to test the ticket- for which the test cases were written

Learnings:

Learnt to write systematic test cases and testing an application

Hours: 9 hours

Total: 333 hours

Blockers:

No major blockers

27 February 2026

Entry:

Updated the SCRUM sheet for the day, testing the ticket completed testing according to the test cases prepared, added the missing test cases, going over the ticket

Learnings:

Completed the entire testing for the test cases written

Hours: 9 hours

Total: 342 hours

Blockers:

No major blockers

28 February 2026

Entry:

Experimented with K6 load testing scripts and analyzed performance metrics. Documented observations on API response times.

Learnings:

Learned how to interpret performance bottlenecks using K6 metrics.

Hours: 9 hours

Total: 351 hours

Blockers:

none

1 March 2026

Entry:

Researched modern UI/UX principles and their impact on user engagement.

Learnings:

Learned about accessibility standards and responsive design patterns.

Hours: 9 hours

Total: 360 hours

Blockers:

none

2 March 2026

Entry:

Updated the SCRUM sheet for the day , tested the recent application release,learnt using rancher.

Learnings:

Testing of the application to be released and rancher usage

Hours: 9 hours

Total: 369 hours

Blockers:

No major blockers

3 March 2026

Entry:

Updated the SCRUM sheet for the day and also got to update the new section of the scrum sheet, received a new ticket for which the test plan was written.

Learnings:

Got to know how to match the different tables and datas. received a new ticket for which the test plan was written.

Hours: 9 hours

Total: 378 hours

Blockers:

No major blockers

4 March 2026

Entry:

Updated the daily tracking sheet by adding a case tracking section. Created a test plan for the assigned task, reviewed it, and incorporated necessary changes. Updated the flowchart in the test plan based on different scenarios and understood how the sorting functionality works.

Learnings:

Gained better understanding of how to structure a test plan and represent workflows using flowcharts. Learned how sorting functionality behaves across different scenarios.

Hours: 9 hours

Total: 387 hours

Blockers:

No major blocker

5 March 2026

Entry:

Updated the daily tracking sheet. Started writing automation tests for the assigned task. After review approval, continued developing automation scripts and performed initial testing.

Learnings:

Learned how to translate test cases into automation scripts and understood the importance of approval before proceeding with implementation.

Hours: 9 hours

Total: 396 hours

Blockers:

Minor delays due to review dependency

6 March 2026

Entry:

Updated the daily tracking sheet and refined the automation script based on testing observations.

Learnings:

Improved understanding of script optimization and handling edge cases in automation.

Hours: 9 hours

Total: 405 hours

Blockers:

No major blockers

7 March 2026

Entry:

Refined automation scripts and worked on handling dynamic elements in tests. Updated the tracking sheet with new test cases.

Learnings:

Enhanced skills in writing robust automation scripts for complex UI components.

Hours: 9 hours

Total: 414 hours

Blockers:

none

8 March 2026

Entry:

Studied documentation for various open-source libraries to understand their implementation details.

Learnings:

Understood the importance of well-structured code and thorough documentation.

Hours: 9 hours

Total: 423 hours

Blockers:

none

9 March 2026

Entry:

Worked on improving and stabilizing the automation script. Updated daily tracking sheet accordingly.

Learnings:

Learned how to debug automation failures and improve script reliability.

Hours: 9 hours

Total: 432 hours

Blockers:

Some time spent debugging issues

10 March 2026

Entry:

Worked on understanding the existing implementation and continued improving automation scripts.

Learnings:

Improved understanding of workflow and system behavior.

Hours: 9 hours

Total: 441 hours

Blockers:

No major blockers

11 March 2026

Entry:

Reviewed existing test scenarios and aligned them with requirements. Continued refining automation scripts and ensured proper coverage of key flows.

Learnings:

Understood how to improve test coverage and identify missing scenarios.

Hours: 9 hours

Total: 450 hours

Blockers:

No major blockers

12 March 2026

Entry:

Worked on debugging issues in automation scripts and fixing failing test cases. Verified results after fixes.

Learnings:

Learned how to debug failures and handle unexpected test behavior.

Hours: 9 hours

Total: 459 hours

Blockers:

Time spent on debugging

13 March 2026

Entry:

Enhanced automation scripts by adding additional validations and improving reliability of test execution.

Learnings:

Improved understanding of validation techniques in testing.

Hours: 9 hours

Total: 468 hours

Blockers:

no major blockers

14 March 2026

Entry:

Refined automation scripts and worked on handling dynamic elements in tests. Updated the tracking sheet with new test cases.

Learnings:

Enhanced skills in writing robust automation scripts for complex UI components.

Hours: 9 hours

Total: 477 hours

Blockers:

none

15 March 2026

Entry:

Focused on personal professional growth by attending virtual tech seminars and reading industry reports.

Learnings:

Stayed informed about current trends and future directions in technology.

Hours: 9 hours

Total: 486 hours

Blockers:

none

16 March 2026

Entry:

Completed automation script development. Changes were reviewed and approved. Identified issues during testing and documented them.

Learnings:

Understood full automation lifecycle from development to issue reporting.

Hours: 9 hours

Total: 495 hours

Blockers:

No major blockers

17 March 2026

Entry:

Prepared detailed test cases for assigned tasks.

Learnings:

Improved ability to design structured test scenarios.

Hours: 9 hours

Total: 504 hours

Blockers:

no major blockers

18 March 2026

Entry:

Executed testing based on prepared test cases and recorded observations.

Learnings:

Learned practical execution and validation of test cases.

Hours: 9 hours

Total: 513 hours

Blockers:

no major blockers

19 March 2026

Entry:

Continued testing and ensured consistency in results across different scenarios.

Learnings:

Improved attention to detail during validation.

Hours: 9 hours

Total: 522 hours

Blockers:

no major blockers

20 March 2026

Entry:

Continued executing test cases and verified system behavior across different scenarios. Documented observations and ensured consistency in results.

Learnings:

Improved ability to validate outputs across multiple scenarios.

Hours: 9 hours

Total: 531 hours

Blockers:

no major blockers

21 March 2026

Entry:

Conducted a comprehensive review of manual test cases and ensured alignment with the latest project requirements. Finalized documentation for recent modules.

Learnings:

Understood the importance of keeping test documentation in sync with product changes.

Hours: 9 hours

Total: 540 hours

Blockers:

none

22 March 2026

Entry:

Explored advanced concepts in software engineering and cloud computing through independent study.

Learnings:

Gained insights into scalable architecture and microservices.

Hours: 9 hours

Total: 549 hours

Blockers:

none

23 March 2026

Entry:

Reviewed test results and ensured all executed test cases were properly documented. Made minor updates to test scenarios.

Learnings:

Learned the importance of maintaining clear and complete test documentation.

Hours: 9 hours

Total: 558 hours

Blockers:

no major blockers

24 March 2026

Entry:

Performed regression testing to ensure recent changes did not impact existing functionality.

Learnings:

Understood how regression testing helps maintain system stability.

Hours: 9 hours

Total: 567 hours

Blockers:

no major blockers

25 March 2026

Entry:

Started manual testing for two assigned tasks. Reviewed the test cases for both and began executing them step by step, ensuring each scenario was validated properly.

Learnings:

Understood how to handle multiple tasks simultaneously and manage test execution efficiently.

Hours: 9 hours

Total: 576 hours

Blockers:

no major blockers

26 March 2026

Entry:

Continued manual testing for both tasks. Covered additional scenarios and validated system behavior across different conditions. Documented observations during execution.

Learnings:

Improved ability to identify inconsistencies and validate outputs across different scenarios.

Hours: 9 hours

Total: 585 hours

Blockers:

no major blockers

27 March 2026

Entry:

Completed manual testing for both tasks. Verified all scenarios, ensured expected behavior, and finalized documentation of test results.

Learnings:

Learned how to complete end-to-end manual testing and ensure proper documentation of results.

Hours: 9 hours

Total: 594 hours

Blockers:

no major blockers

28 March 2026

Entry:

Reviewed results from completed manual testing and cross-checked scenarios to ensure full coverage. Made minor updates to test documentation.

Learnings:

Learned how to validate completeness of testing work.

Hours: 9 hours

Total: 603 hours

Blockers:

None

29 March 2026

Entry:

Dedicated time to learning new programming paradigms and practicing coding challenges.

Learnings:

Improved logical reasoning and code efficiency.

Hours: 9 hours

Total: 612 hours

Blockers:

none

30 March 2026

Entry:

Started working on new testing requirements. Analyzed scenarios and prepared initial test cases.

Learnings:

Improved understanding of requirement analysis.

Hours: 9 hours

Total: 621 hours

Blockers:

none

31 March 2026

Entry:

Continued writing test cases and ensured coverage of positive and negative scenarios.

Learnings:

Learned importance of covering edge cases.

Hours: 9 hours

Total: 630 hours

Blockers:

none

1 April 2026

Entry:

Started executing test cases and validating outputs for different scenarios.

Learnings:

Understood practical execution of planned test cases.

Hours: 9 hours

Total: 639 hours

Blockers:

none

2 April 2026

Entry:

Continued testing and documented observations. Verified behavior across multiple inputs.

Learnings:

Improved validation skills.

Hours: 9 hours

Total: 648 hours

Blockers:

none

3 April 2026

Entry:

Re-tested identified issues and validated fixes. Updated test results accordingly.

Learnings:

Learned importance of re-testing after fixes.

Hours: 9 hours

Total: 657 hours

Blockers:

none

4 April 2026

Entry:

Reviewed test coverage and ensured all scenarios were executed.

Learnings:

Learned to verify completeness of testing cycles.

Hours: 9 hours

Total: 666 hours

Blockers:

none

5 April 2026

Entry:

Explored advanced concepts in software engineering and cloud computing through independent study.

Learnings:

Gained insights into scalable architecture and microservices.

Hours: 9 hours

Total: 675 hours

Blockers:

none

6 April 2026

Entry:

Worked on improving test cases and refining scenarios based on observations.

Learnings:

Understood how to enhance test quality.

Hours: 9 hours

Total: 684 hours

Blockers:

none

7 April 2026

Entry:

Executed the updated test cases prepared earlier and validated system behavior across multiple scenarios, including both expected and edge conditions. Carefully observed outputs for each case and compared them against expected results to ensure accuracy. Documented the results in detail and noted any inconsistencies for further analysis.

Learnings:

Developed a better understanding of how structured test execution helps in identifying inconsistencies and ensuring system reliability.

Hours: 9 hours

Total: 693 hours

Blockers:

none

8 April 2026

Entry:

Performed regression testing to verify that recent updates did not affect existing functionalities. Re-executed previously validated test cases and compared results with earlier outputs to ensure consistency. Paid close attention to areas that were modified to confirm stability across workflows.

Learnings:

Gained clarity on the importance of regression testing in maintaining system stability after changes.

Hours: 9 hours

Total: 702 hours

Blockers:

none

9 April 2026

Entry:

Analyzed the results obtained from testing and ensured that all outcomes were properly documented. Reviewed test cases and execution results to confirm that all scenarios were covered and clearly recorded. Made necessary updates to improve clarity and completeness of documentation.

Learnings:

Learned how proper documentation supports traceability and helps in future validations.

Hours: 9 hours

Total: 711 hours

Blockers:

none

10 April 2026

Entry:

Worked on validating system behavior for multiple workflows by testing different input combinations. Ensured that the system handled each scenario correctly and that outputs matched expectations. Focused on understanding how different flows interact within the system.

Learnings:

Improved understanding of workflow-based testing and system behavior across scenarios.

Hours: 9 hours

Total: 720 hours

Blockers:

none

11 April 2026

Entry:

Reviewed all testing activities carried out during the week and ensured consistency in results. Cross-checked documentation and verified that all executed test cases were properly recorded and aligned with expected outcomes.

Learnings:

Understood the importance of reviewing completed work to ensure accuracy and completeness.

Hours: 9 hours

Total: 729 hours

Blockers:

none

12 April 2026

Entry:

Researched modern UI/UX principles and their impact on user engagement.

Learnings:

Learned about accessibility standards and responsive design patterns.

Hours: 9 hours

Total: 738 hours

Blockers:

none

13 April 2026

Entry:

Started working on additional scenarios by analyzing requirements and executing relevant test cases. Verified system responses for different inputs and documented observations clearly for each scenario.

Learnings:

Improved ability to handle new testing scenarios and adapt to changing requirements.

Hours: 9 hours

Total: 747 hours

Blockers:

none

14 April 2026

Entry:

Continued executing test cases for new scenarios and ensured that all results were accurately recorded. Paid attention to variations in system behavior across inputs and documented findings in a structured manner.

Learnings:

Enhanced attention to detail while validating outputs and documenting results.

Hours: 9 hours

Total: 756 hours

Blockers:

none

15 April 2026

Entry:

Performed re-testing of scenarios to confirm that previously observed issues were resolved and expected behavior was achieved. Verified outputs carefully and ensured consistency across repeated executions.

Learnings:

Learned the importance of re-testing in confirming fixes and maintaining reliability.

Hours: 9 hours

Total: 765 hours

Blockers:

none

16 April 2026

Entry:

Worked on improving and organizing test documentation to ensure clarity and completeness. Updated records to reflect accurate execution results and ensured all scenarios were well documented for future reference.

Learnings:

Understood how well-structured documentation improves traceability and communication.

Hours: 9 hours

Total: 774 hours

Blockers:

none

17 April 2026

Entry:

Performed validation across multiple scenarios to ensure consistent system behavior. Cross-checked outputs with expected results and ensured that all variations were properly handled and documented.

Learnings:

Improved ability to validate system consistency across different conditions.

Hours: 9 hours

Total: 783 hours

Blockers:

none

18 April 2026

Entry:

Reviewed overall testing progress and ensured all work was up to date. Verified that all executed test cases and results were properly documented and aligned with requirements.

Learnings:

Learned how to track and review progress effectively.

Hours: 9 hours

Total: 792 hours

Blockers:

none

19 April 2026

Entry:

Explored advanced concepts in software engineering and cloud computing through independent study.

Learnings:

Gained insights into scalable architecture and microservices.

Hours: 9 hours

Total: 801 hours

Blockers:

none

20 April 2026

Entry:

Worked on additional test scenarios by analyzing requirements and identifying different input combinations. Executed test cases to validate system behavior and ensured that outputs were consistent with expectations. Carefully documented observations for each scenario and reviewed results for accuracy.

Learnings:

Improved ability to derive test scenarios from requirements and validate system behavior effectively.

Hours: 9 hours

Total: 810 hours

Blockers:

none

21 April 2026

Entry:

Executed test cases across multiple scenarios and recorded detailed observations. Focused on verifying system responses under different conditions and ensured proper handling of inputs. Maintained structured documentation for all results.

Learnings:

Enhanced ability to perform consistent and structured test execution.

Hours: 9 hours

Total: 819 hours

Blockers:

none

22 April 2026

Entry:

Performed regression testing to ensure that recent updates did not impact existing functionalities. Re-executed key test cases and compared results with previous outcomes to confirm stability and consistency.

Learnings:

Gained deeper understanding of regression testing and its role in maintaining system reliability.

Hours: 9 hours

Total: 828 hours

Blockers:

none

23 April 2026

Entry:

Reviewed test execution results and ensured that all scenarios were properly covered. Analyzed outputs and updated documentation to reflect accurate and complete information for each case.

Learnings:

Improved skills in analyzing test results and maintaining clear documentation.

Hours: 9 hours

Total: 837 hours

Blockers:

none

24 April 2026

Entry:

Validated system behavior across different workflows by testing multiple input variations. Ensured that the system handled each scenario correctly and maintained consistency in outputs.

Learnings:

Improved understanding of workflow-based testing and system behavior under varied conditions.

Hours: 9 hours

Total: 846 hours

Blockers:

none

25 April 2026

Entry:

Reviewed testing activities carried out during the week and summarized key observations. Ensured that all executed test cases and their results were properly documented and aligned with expected outcomes.

Learnings:

Learned how to consolidate and review testing work effectively.

Hours: 9 hours

Total: 855 hours

Blockers:

none

26 April 2026

Entry:

Focused on personal professional growth by attending virtual tech seminars and reading industry reports.

Learnings:

Stayed informed about current trends and future directions in technology.

Hours: 9 hours

Total: 864 hours

Blockers:

none

27 April 2026

Entry:

Worked on final validation of completed testing tasks. Re-checked important scenarios to ensure consistency and confirmed that all expected behaviors were achieved before completion.

Learnings:

Understood the importance of final validation before closing testing activities.

Hours: 9 hours

Total: 873 hours

Blockers:

none

28 April 2026

Entry:

Reviewed all completed work and ensured that documentation was up to date. Verified that all test cases, results, and observations were clearly recorded and organized.

Learnings:

Improved documentation accuracy and organization.

Hours: 9 hours

Total: 882 hours

Blockers:

none

29 April 2026

Entry:

Analyzed overall testing outcomes and ensured consistency across results. Cross-checked executed scenarios and validated that all requirements were properly covered.

Learnings:

Enhanced analytical thinking and ability to verify test coverage.

Hours: 9 hours

Total: 891 hours

Blockers:

none

30 April 2026

Entry:

Performed final checks on all testing activities and ensured that all scenarios were executed successfully. Verified completeness of work and readiness for closure.

Learnings:

Learned how to finalize testing cycles and ensure completeness.

Hours: 9 hours

Total: 900 hours

Blockers:

none

1 May 2026

Entry:

Reviewed previous work and ensured consistency in all documented results. Re-validated key scenarios to confirm expected behavior and accuracy.

Learnings:

Improved consistency checking and validation skills.

Hours: 9 hours

Total: 909 hours

Blockers:

none

2 May 2026

Entry:

Summarized overall work completed during the period and ensured all documentation was properly maintained. Organized records for clarity and completeness.

Learnings:

Learned how to present consolidated work in a structured manner.

Hours: 9 hours

Total: 918 hours

Blockers:

none
