

Internship Diary

Name: Gauresh G Pai
USN: 4JK22CS016
Company: InUnity Pvt Ltd
Designation: Frontend Developer

29 January 2026

Entry:

Third day of the Internship. Learning day again. Learnt and dived deep into Advanced concepts of HTML and did get introduced to the tech stack used in the company.

Learnings:

<https://learn.shayhowe.com/advanced-html-css/>

<https://www.w3.org/MarkUp/Guide/Advanced.html>

Learnt further about the HTML tags and semantics

Hours: 8 hours

Total: 8 hours

30 January 2026

Entry:

Looked into CSS and its quirks the whole day. Did understand the basics and the importance of CSS and its usage. Looked into existing codebase and understood the basics of the same. Did work on a timetable html CSS page using table and coloring the panel with border colors and more.

Learnings:

CSS is definitely the cloth of the website. As easy as it sounds, its quirks definitely makes a frontend developer to panic at times understanding the difference between absolute relative and fixed with their usage and the different tags took the day.

Hours: 8 hours

Total: 16 hours

31 January 2026

Entry:

Used the learnings from the last 4 days of HTML and CSS to work on a basic web page. Used HTML tags for the body and CSS for styling. Used and got introduced to open source and their widespread usage in the industries. Did get assigned tasks and to learn more about HTML CSS over the weekend.

Learnings:

Blockers would be the docs websites not being concise.

learnings would be a revision on known and studied concepts to be applied on real web pages development.

Hours: 8 hours

Total: 24 hours

1 February 2026

Entry:

Studied HTML CSS and understood the basics of web and how to build web pages. Did go through the overall documentations and the web basics. Understood about the HTTP communication and also the semantic and other important tags and basics of HTML CSS.

Learnings:

Blockers were the sleep increase in complexity from HTML to CSS to complex web vitals. Learnings were the sheer complexity and the importance of understanding how web renders in low level and also how HTML and CSS makes the basics of the whole web

Hours: 8 hours

Total: 32 hours

2 February 2026

Entry:

Briefed about the work to the in charge. Got a session on JavaScript and it's usage and what JS actually is and brushed of concepts of all HTML CSS JS and Git.

Learnings:

JS is the brain of the web.

Hours: 8 hours

Total: 40 hours

3 February 2026

Entry:

Looked into Javascript. Understood and glanced into the concepts of var, let and other data types, basic for loops and other basic programming approaches using JavaScript.

Learnings:

JavaScript has to be the Jack of All trade of Languages.

Hours: 8 hours

Total: 48 hours

4 February 2026

Entry:

Looked into the components and advantages of JavaScript.

Learnings:

JavaScript

Hours: 8 hours

Total: 56 hours

5 February 2026

Entry:

Learnt the basics of JavaScript and Introduction to React.

Learnings:

react is the most widely used and maintained open source frameworks and libraries and widely accepted by the companies

Hours: 8 hours

Total: 64 hours

6 February 2026

Entry:

Studied React hooks and State management and glanced on React components and Nextjs

Learnings:

The react components should always start with capital letters to be imported and exported. React components are widely used and reused across the application.

Hours: 8 hours

Total: 72 hours

7 February 2026

Entry:

Glanced and understood the basics of Next.js and React.js. Got tasks assigned to study about React and Next.js over the weekend and get the work to start from Monday.

Learnings:

React is a single page application.

Hours: 8 hours

Total: 80 hours

8 February 2026

Entry:

Started architectural planning for the modern Todo monorepo, focusing on the integration of Protocol Buffers (Connect RPC) for type-safe communication between React and Node.js.

Learnings:

Learned how Protobuf can enforce strict contracts between frontend and backend, reducing runtime errors and improving developer productivity in a monorepo setup.

Hours: 8 hours

Total: 88 hours

Blockers:

None

9 February 2026

Entry:

Got tasks assigned. Started to work on the frontend for Control Plane.

Learnings:

TanStack Router is better and good for routing and data caching.

Hours: 8 hours

Total: 96 hours

10 February 2026

Entry:

Looked into Shopify App Admin embedded apps.

Learnings:

Shopify embedded apps

Hours: 8 hours

Total: 104 hours

11 February 2026

Entry:

Refactored the existing codebase to fix the existing formatting issues in the cp repository.

Learnings:

Had to migrate from eslint to biome

Hours: 8 hours

Total: 112 hours

12 February 2026

Entry:

Worked on the refactoring of the code moving the interfaces and types to have better code standards and readability

Learnings:

Code standards are really important to be maintained.

Hours: 8 hours

Total: 120 hours

13 February 2026

Entry:

Worked on Shopify embed liquid app dev, fixed the intervention script and also refactored the existing control plane project for types and Interfaces.

Learnings:

Didn't use AI but did self.

Hours: 8 hours

Total: 128 hours

14 February 2026

Entry:

Looked into the Shopify storefront intervention script and also refactoring the code quality for the control plane components and different files

Learnings:

Apparently there is no difference in importing from one big file or bits and pieces of smaller ones

Hours: 8 hours

Total: 136 hours

15 February 2026

Entry:

Configured the monorepo tooling using pnpm Workspaces and Turborepo. Set up the basic structure for 'backend', 'frontend', and 'proto' directories.

Learnings:

Gained insights into Turborepo's caching mechanisms and how pnpm workspaces manage shared dependencies efficiently across different packages.

Hours: 8 hours

Total: 144 hours

Blockers:

None

16 February 2026

Entry:

Did go through a lot of documentation for Shopify app dev and was blocked by PR to work further on both Cp and Shopify app

<https://shopify.dev/docs/apps/launch/built-for-shopify#apply-for-built-for-shopify-status>

<https://shopify.dev/docs/apps/launch/built-for-shopify/requirements>

<https://shopify.dev/docs/apps/launch/shopify-app-store/app-store-requirements>

<https://shopify.dev/docs/apps/launch/shopify-app-store/best-practices>

<https://help.shopify.com/en/partners/faq/removal>

Learnings:

Shockingly I had forgotten that React is owned by Facebook.

Hours: 8 hours

Total: 152 hours

17 February 2026

Entry:

looked into docs of Shopify

<https://help.shopify.com/en/partners/faq/removal> '

<https://shopify.dev/docs/apps/build/performance> '

<https://web.dev/articles/vitals> '

<https://shopify.dev/docs/apps/build/integrating-with-shopify> '

<https://shopify.dev/docs/apps/build/discounts#build-with-shopify-functions> '

<https://shopify.dev/docs/apps/launch/distribution/select-distribution-method> - Public distribution '

<https://shopify.dev/docs/apps/launch/billing> '

<https://blog.logrocket.com/5-things-you-can-do-with-css-instead-of-javascript/> '

<https://shopify.dev/docs/apps/build/functions> '

Learnings:

Web vitals are better viewed and judged via lighthouse scores

Hours: 8 hours

Total: 160 hours

18 February 2026

Entry:

Learned about setting up DNS and configuring domains using godaddy and Vercel.

Learnings:

the CNAME and txt records are configured with the Anchor records.

Hours: 8 hours

Total: 168 hours

19 February 2026

Entry:

Looked into html css js caching and other browser specific approaches.

Learnings:

Caching in Apple iPhones is a hectic out of bound issue that has a lot of issues

Hours: 8 hours

Total: 176 hours

20 February 2026

Entry:

Worked on the Shopify app dev fixing the inshop issues using coderabbit

Learnings:

Coderabbit ai deos have a few bugs that could have been resolved if it was open source

Hours: 8 hours

Total: 184 hours

21 February 2026

Entry:

Worked on the control plane and also resolved the IOS based issues

Learnings:

The IOS iPhone has specific restrictions about the browser length

Hours: 8 hours

Total: 192 hours

22 February 2026

Entry:

Defined the initial .proto schemas for the Todo service, including Create, Read, Update, and Delete operations for tasks.

Learnings:

Understood the syntax of Protobuf messages and services, and how Connect-RPC generates TypeScript interfaces from these definitions.

Hours: 8 hours

Total: 200 hours

Blockers:

None

23 February 2026

Entry:

Worked on creating a new MCP server to validate the API endpoints and the schemas and types

Learnings:

MCP servers are essential for the agents nowadays

Hours: 8 hours

Total: 208 hours

24 February 2026

Entry:

Worked on the refactoring of the Control Plane and also on the inshop Shopify admin application mock data ui.

Learnings:

Did face few issues with Polaris and also with the Shopify specific issue during development.

Hours: 8 hours

Total: 216 hours

25 February 2026

Entry:

Worked on refactoring the cp code and role based access

Learnings:

React is the most widely used open source framework

Hours: 8 hours

Total: 224 hours

26 February 2026

Entry:

Worked on the role based access and did restrict specific access to viewers and members

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 232 hours

27 February 2026

Entry:

Worked on the role based access for specific pages and also create the Pull Request for the same

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 240 hours

28 February 2026

Entry:

Worked on the portfolio website updating a few things.

Learnings:

The biome config is not always reliable

Hours: 8 hours

Total: 248 hours

1 March 2026

Entry:

Implemented the Express.js backend shell and integrated the generated Connect-RPC handlers. Connected the backend to a MongoDB instance using Mongoose.

Learnings:

Learned how to map Protobuf service definitions to actual Express route handlers and how Mongoose schemas can align with Protobuf types.

Hours: 8 hours

Total: 256 hours

Blockers:

None

2 March 2026

Entry:

Worked on the designs of the landing page

Learnings:

learnt figma and its own kicks

Hours: 8 hours

Total: 264 hours

3 March 2026

Entry:

Worked on refactoring the code with coderabbit AI

Learnings:

Coderabbit AI is an incremental modal

Hours: 8 hours

Total: 272 hours

4 March 2026

Entry:

Worked on the documentation part and learnt about Notions and its usages

Learnings:

Writing technical documentation is a skill

Hours: 8 hours

Total: 280 hours

5 March 2026

Entry:

Reported the work and the refactoring details in the technical documentations

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 288 hours

6 March 2026

Entry:

Worked on the theme change and the refactoring of the ecom demo repo.

Learnings:

The tailwind CSS classes are widely used

Hours: 8 hours

Total: 296 hours

7 March 2026

Entry:

Worked on the refactoring and reporting of multiple projects

Learnings:

Shopify App development

Hours: 8 hours

Total: 304 hours

8 March 2026

Entry:

Bootstrapped the React 19 frontend using Vite and SWC. Integrated TanStack Router for file-based routing and planned the layout.

Learnings:

Explored the new features of React 19 and the benefits of file-based routing in TanStack Router for better code organization and type safety.

Hours: 8 hours

Total: 312 hours

Blockers:

None

9 March 2026

Entry:

Got 2 PRs merged to main in one repository

Learnings:

GitHub Actions ci usually needs write permissions most of the time

Hours: 8 hours

Total: 320 hours

10 March 2026

Entry:

Worked on the Shopify storefront - specially the Storefront intervention script and got the expected result

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 328 hours

11 March 2026

Entry:

Worked on the intervention script and tracking and also got the observe linter PR accepted

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 336 hours

12 March 2026

Entry:

Worked on the config settings for each store

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 344 hours

13 March 2026

Entry:

Worked on refactoring and cleanup of the codebase

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 352 hours

14 March 2026

Entry:

Worked on the change of stack for js-sdk from eslint, prettier to biome

Learnings:

Biome single handedly can be used as a replacement for more than 4 packages

Hours: 8 hours

Total: 360 hours

15 March 2026

Entry:

Developed the core Todo list UI components using Tailwind CSS and shadcn/ui. Focused on creating a clean, responsive design.

Learnings:

Deepened knowledge of Tailwind CSS utility classes and how shadcn/ui provides accessible, unstyled components that are easy to customize.

Hours: 8 hours

Total: 368 hours

Blockers:

None

16 March 2026

Entry:

Worked on checking the ability of Shopify store - Admin GraphQL API and REST.

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 376 hours

17 March 2026

Entry:

Worked on the refactoring of the theme into bootstrap script

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 384 hours

18 March 2026

Entry:

Worked on debugging of the Shopify admin app

Learnings:

Bugs with redis to handle storage are really inconsistent with persistent connection

Hours: 8 hours

Total: 392 hours

20 March 2026

Entry:

Did get 4 PRs accepted. Worked on improvement of the landing page and fixed the overall approach of the shopify admin app

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 400 hours

21 March 2026

Entry:

Got the landing page done and tailored well for shoptalk

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 408 hours

22 March 2026

Entry:

Integrated TanStack Query on the frontend to handle data fetching from the Connect-RPC backend.
Implemented optimistic UI updates for task completion.

Learnings:

Learned how TanStack Query's mutation hooks can be used with 'onMutate' to provide an instantaneous user experience while background syncing.

Hours: 8 hours

Total: 416 hours

Blockers:

None

23 March 2026

Entry:

Worked on intervention script for fetching product client side and server side both. also fixed a bug in the landing page

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 424 hours

24 March 2026

Entry:

Worked on the Shopify admin app frontend for onboarding

Learnings:

Java script is the most used language for web worldwide

Hours: 8 hours

Total: 432 hours

25 March 2026

Entry:

Worked on shopify admin app and did tailor a few ui updates

Learnings:

react router has its own issues

Hours: 8 hours

Total: 440 hours

26 March 2026

Entry:

Worked on the Shopify application part of the application

Learnings:

Shopify integrations are divided into many types

Hours: 8 hours

Total: 448 hours

27 March 2026

Entry:

Worked on fixing the bug of Shopify admin app

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 456 hours

28 March 2026

Entry:

Worked on implementing authentication logic using JWT and securing the Connect-RPC endpoints in the Express backend.

Learnings:

Understood the flow of stateless authentication and how to use middleware in Express to validate tokens for RPC calls.

Hours: 8 hours

Total: 464 hours

Blockers:

None

29 March 2026

Entry:

Refined the frontend authentication flow, adding login and signup pages with form validation powered by Biome's linting rules.

Learnings:

Observed how Biome can replace multiple tools like ESLint and Prettier, offering faster performance and simplified configuration.

Hours: 8 hours

Total: 472 hours

Blockers:

None

30 March 2026

Entry:

Worked on the new landing page design implementation

Learnings:

overflow and paddings are much needed utils in CSS

Hours: 8 hours

Total: 480 hours

31 March 2026

Entry:

Worked on the landing page of the site

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 488 hours

1 April 2026

Entry:

Completed the work on the landing page of the site

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 496 hours

2 April 2026

Entry:

worked on researching about the Shopify app publish

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 504 hours

4 April 2026

Entry:

Enhanced the Todo application with task categorization and filtering based on priority and due dates.

Learnings:

Learned complex MongoDB aggregation queries for filtering and how to reflect these filters in the TanStack Router search parameters.

Hours: 8 hours

Total: 512 hours

Blockers:

None

5 April 2026

Entry:

Implemented real-time notifications for task deadlines using a combination of backend cron jobs and frontend alerts.

Learnings:

Explored strategies for managing scheduled tasks in Node.js and providing timely feedback to users without constant polling.

Hours: 8 hours

Total: 520 hours

Blockers:

None

6 April 2026

Entry:

Worked on the Shopify app frontend focusing on the SPA bit

Learnings:

SPA stands for Single page application

Hours: 8 hours

Total: 528 hours

7 April 2026

Entry:

Worked on the SPA bit of the application and changing the ui to be more in vision with the native side of Shopify

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 536 hours

8 April 2026

Entry:

Worked on the finalization of the design and implementation of the landing page

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 544 hours

9 April 2026

Entry:

Refactored the AEO of the landing page

Learnings:

AEO means Answer Engine Optimization

Hours: 8 hours

Total: 552 hours

10 April 2026

Entry:

Worked on the landing page AEO and SEO and also refactored and fixed a bug in the hydration and the header manipulation in the Shopify app

Learnings:

Many types of exports exist in react

Hours: 8 hours

Total: 560 hours

11 April 2026

Entry:

Added support for dark mode using Tailwind CSS and integrated a theme switcher component from shadcn/ui.

Learnings:

Mastered the use of 'dark:' variants in Tailwind and how to persist user theme preferences in local storage.

Hours: 8 hours

Total: 568 hours

Blockers:

None

12 April 2026

Entry:

Spent the day optimizing the application's performance, focusing on minimizing bundle size and improving First Contentful Paint.

Learnings:

Learned about Vite's build optimizations and how to analyze bundle sizes to identify and remove redundant dependencies.

Hours: 8 hours

Total: 576 hours

Blockers:

None

13 April 2026

Entry:

Worked on writing backend contract and documentation for intervention

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 584 hours

14 April 2026

Entry:

Did write the documentation for the Shopify intervention server

Learnings:

Technical documentation is the best skill an SDE can have and an essential skill as well

Hours: 8 hours

Total: 592 hours

15 April 2026

Entry:

Research and learnt about Shopify chat agent and also created multiple PRs for the landing page

Learnings:

React Tailwind CSS is the tech stack beauty combination

Hours: 8 hours

Total: 600 hours

16 April 2026

Entry:

Got few PRs on refactoring of the code merged

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 608 hours

Blockers:

Blocked by backend

17 April 2026

Entry:

Did refactor the code

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 616 hours

18 April 2026

Entry:

Did create the navbar component for the shopify application

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 624 hours

19 April 2026

Entry:

Set up automated testing for the backend services using Vitest. Wrote unit tests for the Connect-RPC logic.

Learnings:

Gained experience in writing testable RPC handlers and mocking database connections for reliable unit testing.

Hours: 8 hours

Total: 632 hours

Blockers:

None

20 April 2026

Entry:

Worked on the beautification of the frontend of the Shopify App

Learnings:

Using Shopify dev MCP to validate the stack is must for an Shopify application

Hours: 8 hours

Total: 640 hours

21 April 2026

Entry:

Did complete the work and publish and resolved multiple issues in the Shopify inshop application

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 648 hours

22 April 2026

Entry:

Assist on the review of the Pull request

Learnings:

Pull requests are sometimes tedious to review

Hours: 8 hours

Total: 656 hours

23 April 2026

Entry:

Worked on the landing page and cp

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 664 hours

24 April 2026

Entry:

Worked on multiple issues, resolved multiple production issues. Researched and worked on the GDPR checks and also checked for the CHANGELOG and AGENTS.md file based changes and made sure all the changes are intact

Learnings:

CHANGELOGs are the best way to streamline/identify the changes/bugs

Hours: 8 hours

Total: 672 hours

25 April 2026

Entry:

Implemented end-to-end testing for critical user flows using Playwright. Verified the Todo creation and deletion cycle.

Learnings:

Understood the importance of E2E tests in catching regressions that unit tests might miss, especially in a full-stack environment.

Hours: 8 hours

Total: 680 hours

Blockers:

None

26 April 2026

Entry:

Finalized the deployment pipeline using GitHub Actions to deploy the frontend to Vercel and the backend to a cloud provider.

Learnings:

Learned how to configure CI/CD pipelines for monorepos, ensuring that only the changed packages are built and deployed.

Hours: 8 hours

Total: 688 hours

Blockers:

None

27 April 2026

Entry:

Worked on the Shopify intervention server and also on the backend server to trigger the same

Learnings:

The blockers for today included the limitations of Shopify applications and their regulations

Hours: 8 hours

Total: 696 hours

28 April 2026

Entry:

Worked on a new blog for the landing page and announcement banner update

Learnings:

Continued working on frontend development and codebase exploration

Hours: 8 hours

Total: 704 hours
